

Abstract

Method and arrangement for optical information presentation

A method for optical information presentation on information, which is provided via an additional service and is transmitted via an air interface, on a mobile radio terminal (210) or an accessory (130) for such a mobile radio module (210), in which case a mixed graphics/text presentation is provided, for which purpose stored graphics and/or graphics elements are used in the mobile radio terminal (210) and/or accessory (130), which are called up via address and position data which is transmitted together with text information, and are positioned on an optical display unit (131; 211).
